

Bird List

from the Ebro Delta

In the following list you will find all the bird species recorded to the present time in the Ebro Delta. We have excluded some species coming from captivity as we don't consider them relevant for the general list. We hope this list will help visitors and the clients from Audouin Birding Tours to know which birds may be able to see and help them to plan their holidays. This list includes 316 species, but many birds, especially the ones living in the mountains, are common in the surroundings of the Delta and may not appear in this list. Please send us an email if you are interested on those species or visit our website. info@audouinbirding.net <http://www.audouinbirding.net/>

The months with more species recorded are September, April, and October.

The first and second columns are the bird names in English and Latin, followed by 12 columns representing the 12 months of the year. If a bird is present in one of the months it will be marked with "X". The vagrants or very scarce birds, we have not added any phenology indications, as they are exceptional and not predictable for a person planning to visit the Delta.

The last column refers the status of the species in the Delta. If a bird is abundant it will be in capital and if it is scarce in small letters.

Legend:

A= Accidental, Vagrant

E= Estival, Summering

N= Nidificante, Breeding

R= Residente, Resident

H= Hivernant, invernante, Wintering

EXT= Extinguido, Extingit, Extinct

I= Introducido, Introduit, Introduced

If you find any mistakes or missing species please let us know sending an e-mail to info@audouinbirding.net .
